## The spring newsletter!

What makes our spring newsletter so special? Absolutely nothing!

But hey.... spring is in town and the newsletter has to have a catchy name, right?

---

## Building with light clay-straw technique

We made it!!! After six weeks of mixing clay, sand, straw and water , squeezing it so tight untill our hands hurt, we finally finished our bed bunks!!!

---

I want to thank everyone who gave us a helping hand here:  
My parents, Katrien, Jan, Jerre, Joeri and Belle & Rachel, thank you so much  
for your support and bringing joy into the project once more! Without you guyz it

---

would have taking me forever!

If you want to learn more on how we constructed this bedbunk, check out the page [Light clay straw technique](#) on our website!!!

---

## Poured loam floor: It seems to work out fine!!!

In our previous newsletter we wrote about our trial to build a poured loam floor on top of a wooden subfloor. You can read the article on our website by clicking [here](#).

Meanwhile the earthen floor has fully dried and there are no cracks at all!!!!

This is beyond our expectations and we are ready to take it to the next level: a final layer of loam finished with linseed oil. We will keep you posted about this little adventure!

---

---

## Low impact hiking cart

Past summer we hiked through the alps and the pyrenees. With a child of 3 years old it was quiet a challenge: How to carry all the gear (total of 32 kg) and our son at the same time?

A self-made low impact hiking cart did the trick!

Find out more about our hiking cart [here](#) !!!

---

---

---

## Coming up next....

In our next newsletter we will (hopefully) tell you how we made a balluster out of beech branches we harvested just last week!!!

I'll finally be able to test-drive this little baby....

---

Stay tuned for more low impact news!
